

IQ8Alarm Plus: loop powered alarm devices EN 54-3 & EN 54-23 compliant

- ✓ Completely bus supplied addressable alarm devices
- ✓ High sound pressure level of up to 97 dB(A)
- ✓ Cost-saving integration into the esserbus-Plus system
- ✓ Activation of up to 64 alarm devices per esserbus-Plus
- ✓ Flexible load factor for easier project planning and installation
- ✓ Multilingual voice alarm function in 5 languages
- ✓ 20 different international signal tones incl. DIN-tone available
- ✓ Full compliance with EN 54-3 & EN 54-23
- ✓ Synchronized activation within loop and panel
- ✓ Simple and user-friendly programming via tools 8000
- ✓ Built-in isolator in each alarm device

Alarm signalling: The first step towards evacuation

IQ8Alarm Plus is currently the most cost-effective and reliable way of alarm signalling.

With various country-specific alarm tones (e.g. DIN tone or the Dutch slow-woop tone), the completely loop powered optical alarm signalling acc EN 54-23 as well as different voice messages in up to 5 languages, the IQ8Alarm Plus with its outstanding features significantly outperforms state of the art within the fire alarm sector.

The device is directly installed at and connected to the esserbus-Plus (powered loop), making expensive external voltage supplies and connection modules dispensable. All features are combined in just one housing - that only achieves IQ8Alarm Plus.

With a range from simple sounder to combined voice sounder VAD devices

Various types of IQ8Alarm Plus devices are available.

Five product groups offer always the right solution for the desired application:

- Alarm Sounder
- Visual Alarm Device (VAD)
- Voice Sounder
- Combined Sounder VAD
- Combined Voice Sounder VAD

Depending on the version, the signaling devices are available in white or red housing or equipped with white or red light flash. Each alarm device with voice alarm messages can also emit standard alarm signals, including country-specific alarm tones.

Direct powered loop supply for optical alarm signalling according to EN 54-23

Innovative technology in IQ8Alarm Plus devices enables visual alerting in accordance with EN 54-23 to be directly supplied by the esserbus-Plus (powered loop).

The products in compact design feature high output LEDs, advanced optics and an innovative mirror design, providing outstanding light coverage at low current draw.

Specifically designed and approved to meet the EN 54-23 standard, the loop powered visual alarm devices are available with red or white flash, delivering synchronized visual cues, outstanding quality, reliability and extended operational life.

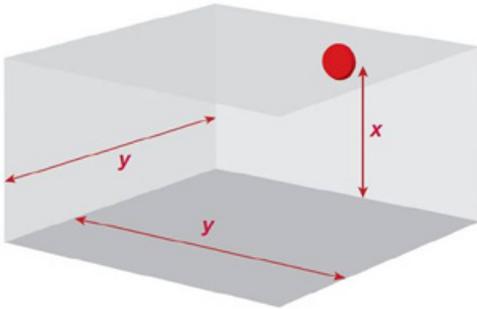

The visual alarm device IQ8Alarm corresponds to EN 54-23 category W for wall mount and is specified for square coverage volume W-2,4-5,0 up to W-3.6-8.

To help identify your Visual Alarm Device (VAD) requirements in line with the EN 54-23 standard, we have developed an easy to use online device selection guide (esser.maxpector.com).

Simply enter the room dimensions and the web tool will help you estimate the number of VADs required for your space.

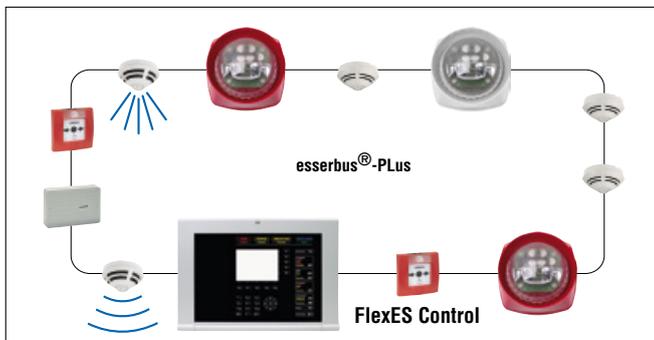

Completely loop powered alarm devices

Square coverage volume of category W-x-y for wall mount

x = maximum mounting height on the wall ($\geq 2,4$ m)
y = width of a square room in m, covered by the device

Application example

IQ8Alarm Plus connected to the esserbus-PLus at the FACP FlexES Control.

More safety with voice alarm instructions

IQ8Alarm Plus signalling devices with 5 different voice alarm messages in up to 5 different languages and 20 different alarm tones guarantee the highest degree of safety and are currently the most cost-effective alarm signalling solution available.

Voice alarm messaging is far more effective than conventional alarm signalling via alarm sounders.

While people do not immediately react to abstract alarm tones or optical alarm signals, they act immediately and appropriately on explicitly broadcast voice commands in cases of fire. With the alarm messages and evacuation messages provided, IQ8Alarm Plus devices significantly contribute to reducing reaction times until evacuation is initiated. Thus, people's lives can be protected more effectively.

Multilingual alarm messages allow reliable alarm signalling to quickly direct and inform even international visitors to a building or international guests at public gatherings about evacuation procedures.

Additionally, regional alarm signalling requirements are fulfilled by providing country-specific alarm tones such as the DIN tone, the USA horn, the French tone and also the Dutch slow-woop tone.

IQ8Alarm Plus devices ensure that everyone can be quickly informed, alerted and safely evacuated in case of emergency.

IQ8Quad detectors and IQ8Alarm Plus tone table

Simple programming with IQ8Alarm Plus

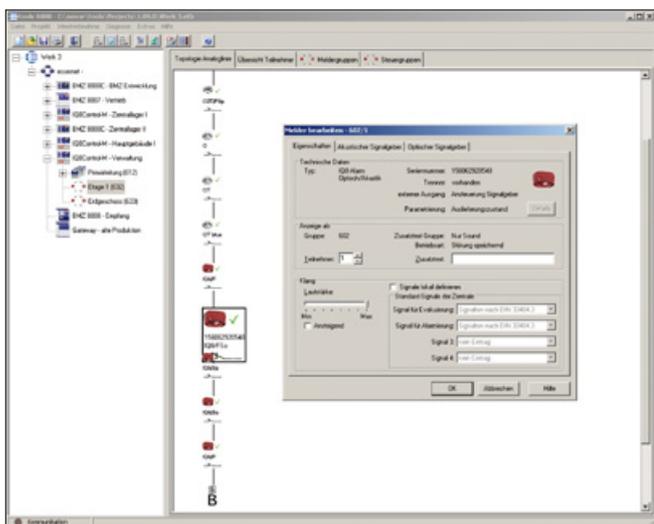

Each IQ8Alarm Plus can be programmed easily. Innovative IQ8Quad fire detectors with integrated alarm unit hold a unique position within their market segment and operate homogeneously on the uniform platform as the new IQ8Alarm Plus devices. Thus, programming is easier and more flexible than it used to be.

With the drop-down menu, individual acoustic signal options or optical signal range (EN 54-23) can be set. Event-controlled signal activation can be used for alarm signals, evacuation signals or emergency signals. In addition, a test message can be activated.

The configuration of the respective signal model is just as easy to make via drop-down menus.

A signal model can contain up to four partial signals. Therefore, signal models can be individually programmed by selecting, for instance, a country-specific alarm tone (e.g. DIN tone) as the start signal, followed by a voice message in German.

Thus, the signal sequence can be chosen to suit the respective requirements. All information required for programming IQ8Alarm Plus devices can be obtained when attending our programming training courses.

Programming via tools 8000

Calculation of the maximum number of alarm devices on esserbus-Plus powered loop

The maximum number of bus-enabled alarm devices on esserbus-Plus powered loop depends on the type of alarm device (and selected settings), load factor, loop length and cross section. For this purpose, the individual load factors of the individual alarm devices must be added.

The load factor defines the current consumption of the alarm device on the ring bus in the event of an alarm. The maximum permissible total load factor of a single loop is 96 (consider

FACP information). Altogether up to 127 bus devices per loop can still be connected.

A calculation tool is available on our website to determine the load factor values.

You can find more detailed information on the installation and the operation in the documentation Part No. 798804, 798960.GB0.

IQ8Alarm Plus - elegant and conspicuously inconspicuous design

Harmonious integration of modern building technology in line with highest security standards is becoming evermore crucial these days.

With its flat design and various combinable colour options, the IQ8Alarm Plus device can be perfectly adapted to almost any environment.

Thus, building technology need no longer be seen as an eye-sore that does not fit in with the interior design in buildings.
